 - **Exposure:** C++, Bootstrap, Axios
-

PROJECT WORK

AucShoes | Developer | [Code URL](#) | [Live URL](#)

2022

A Ruby on Rails application that helps to bid and sell shoes online.

- Integrated Devise gem to support secure user authentication such as login, registration, and user-specific permissions.
- Developed a feature for sellers to upload photos of their shoes on profile photos by utilizing Active Storage in Rails.
- Allowed new users to confirm signup through an email sent through Mailer class after account creation.
- Designed and styled the components of the application using Bootstrap CSS.

Stock App | Developer | [Code URL](#)

2022

A Ruby on Rails API paired with ReactJS front-end built for users to buy and sell stocks.

- Implemented a feature allowing users to view a list of available stocks and real-time stock data using the IEX Finance API.
- Built a feature for the admin and users to track all transactions through the Application Controller of Rails.
- Utilized JWT and Cross-Origin Resource Sharing to secure the authentication of the users.
- Allowed users to create and login their account using Devise gem.

Journal App | Developer | [Code URL](#) | [Live URL](#)

2022

A Ruby on Rails application that helps to create a to-do list.

- Created a feature that lets the users organize their tasks through different categories using Rails Associations.
- Added task and category controllers enabling users to create and manage their own categories and tasks.
- Utilized Heroku for continuous deployment of pull requests of the application.
- Designed the front-end aspect of the application using Bootstrap.

Slack App | Developer | [Code URL](#)

2022

A ReactJS application built for users to communicate with one another real-time.

- Used the endpoints of Slack API to build the basic features of the app for registrations, login, fetching, and sending of messages.
 - Utilized Fetch API of ReactJS to get and post data from the Slack API and correctly parse the response.
 - Enabled the Router of ReactJS to properly route the components and features of the app.
 - Employed the React Hooks to set the state of components and form validations..
-

PROFESSIONAL EXPERIENCE

Start Virtual | Virtual Assistant | Remote

MAY 2022 - JUN 2022

- Cold called about 200 and texted 1,000 potential sellers daily to check if they are interested in selling their house.
- Categorized the potential leads as a cold, warm or hot lead depending on my client's preference about the state of their properties.

Concentrix | Sales II Advisor | Muntinlupa & Makati City

JUL 2019- JAN 2021

- Achieved being one of the top performers for the most of 2021 and being the top agent of the LoB during the Q4 2021.
 - Managed about 30 calls a day regarding customer's concern with their vehicle or if they have concerns about GM's dealerships all around the USA.
-

EDUCATION

Full Stack Web Development, Avion School

2022

Bachelor of Science in Electronics Communication Engineer (Undergraduate), University of the Philippines Diliman

2019
